***Reasons for allowance***

The following is an examiner's statement of reasons for allowance:

The instant invention is deemed to be directed to an unobvious improvement to an agricultural-implement hydraulic circuit over U.S. Patent No. 5,992,147 which teaches an implement hydraulic circuit comprising: a pump 22 supplying pressurized fluid to a first service line and a second service line via a feed line; means 23 for varying the flow rate of said pump 22; a distributor valve 10 disposed between the first service line and the second service line, the first service line and the second service line being connected and disconnected according to a position of said distributor valve 10; a hydraulic motor 7 coupled to the first service line through said valve 10, said hydraulic motor 7 discharging fluid to a return line; a hydraulic actuator coupled to the second service line.

The improvement comprises an indicator-valve assembly coupled to the feed line, said indicator-valve assembly including an indicator sensitive to pressure in the feed line such that said indicator indicates a predetermined pressure in the feed line to an operator.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

***Prior Art***

Prior art made of record but not relied upon is considered pertinent to Applicant's disclosure and consist of two patents.

Friedrichsen (5,452,579) is cited to show a hydraulic system having a pump, a motor and an actuator, a pressure indicator but fails to teach a distributor valve and an indicator-valve assembly that indicates a predetermined pressure to an operator.

Friedrichsen (5,493,861) is cited to show a hydraulic system having a pump, a motor and an actuator, a pressure indicator but fails to teach a distributor valve and an indicator-valve assembly that indicates a predetermined pressure to an operator.
